VERSADRY TRACK PROTECTS DRYWALL FROM WATER DAMAGE

VERSADRY DRYWALL TRACK SYSTEM

Patented system allows the installation of drywall to sit 2 inches off the floor on a steel shelf. This shelf mitigates the wicking of water both during construction and the life of the building.

- PROTECTS WALLS FROM BASEBOARD DAMAGE
- HELPS REDUCE MOLD GROWTH

VERSADRY TRACK CERTIFICATIONS:

NO CAULK NEEDED!

FIRE RESISTANCE: Independent accredited 3rd party tested per ASTM E119, consistent with the UL Wall Design U423 construction, to meet a 1 hour & 2 hour Fire Rating without caulk.

- The tested 1 hour fire rated wall construction consisted of: 18mil VersaDry Track, VersaDry Fire Clips, 1 layer of 5/8" Type X Gypsum, & 20ga 3-5/8" studs spaced 16"OC
- The tested 2 hour fire rated wall construction consisted of: 18mil VersaDry Track, VersaDry Fire Clips, 2 layers of 5/8" Type X Gypsum, & 20ga 3-5/8" studs spaced 16"OC
- VersaDry 1 piece design with clip at floor & ceiling passed ASTM E119 1-hour and 2-hour fire and hose stream test without caulk at Intertek certified independent 3rd party test lab.

ACOUSTICAL PERFORMANCE:

3rd part tested per ASTM E90-09 and calculated per ASTM E413-16.

- STC = 45 for Non-Fire Rated 18mil VersaDry Track w/ 1 layer of 5/8" Type X Gypsum
- STC = 48 for Non-Fire Rated 18mil VersaDry Track w/ 1 layer of Impact Resistant Gypsum

- STC = 46 for 1 hour Fire Rated 18mil VersaDry Track w/ 1 layer of Impact Resistant Gypsum
- STC = 53 for 2 hour Fire Rated 18mil VersaDry Track w/ 2 layers of 5/8" Type X Gypsum

KNEE WALL SUPPORT BRACKET ASSEMBLY

Patent Pending

Knee Wall Support Bracket Assembly: What is it? An engineered system compromised of a 1/2" steel base plate welded to a 14ga structural stud.

In the construction industry, a "knee wall" is a term used to describe a short wall that is typically half the height of a full-sized wall. Also known as a "pony wall" or "cripple wall," knee walls are used for various purposes in building design, including providing structural support, dividing spaces, and enhancing aesthetic appeal.

TELLING'S KNEE WALL STUD & BASE PLATE:

- Knee Wall Stud & Base Plate are loaded perpendicular to the leg
- Knee Wall Stud is 300S162-68 14 ga. Competing products utilize 12ga material
- Base Plate is 8" x 3-3/8" and 1/2" thick with groove for Stud
- 1 Knee Wall Stud per Support Stud & Base Plate. Competitive products utilize 2 studs per support bracket
- Higher Allowable Loads than competing products

TRC - TELLING RIGID CLIPS

CLIPS

Telling's line of Premium Rigid Clips Series firmly attach metal framing to metal framing components. These rigid clips are available in 3 gauges; 12, 14 and 16 and come standard with G60 code compliant coating and an optional G90 coating upgrade. Available in a multitude of standard and custom sizes. These clips are made in Telling's manufacturing plants in the USA.

TRC A Series Rigid Right Angle Clips

Predominately Used to Attach Metal Framing to Metal Framing

Section	Clip Thickness	Leg Length (in)	Clip Length (in)	BKT Quantity
TRC223	0.0538" (16ga)	2" x 2"	3.0"	150

BACKING & ASW BREAK AWAY CLIPS

CLIPS

T-BACKING CLIP (TBKC) WALL SUPPORT CLIPS

Example of the Clip used for hanging cupboards.

ALLOWABLE LOADS

Part Number	Stud Properties			F1 Allowable Loads (Lbs)		F3 Allowable Loads (lbs)	
	Mil	Gauge	Fy (ksi)	2 #8 Screws	3 #8 Screws	2 #8 Screws	3 #8 Screws
TBKC	33	20 (S)	33	142	213	321	483

Notes:

1. The allowable loads are based on the steel properties of the members being connected, per AISI S100.
2. Allowable loads indicated on the table(s) are for force in single direction only. The designer shall use the combined forces check as required by AISI S100 if more than one force is applied to the connection.
3. The nominal strength of the screw must be at least 3.75 times the allowable loads.
4. Values include a 3.0 factor of safety.
5. Penetration of screws through joined materials should not be less than three exposed threads. Install and tighten screws in accordance with the screw manufacturer's recommendations.
6. Allowable loads have not been increased for wind, seismic activity, or other factors.

ASW BREAK AWAY ALUMINUM CLIPS

PRODUCT APPLICATION

Area Separation Walls (ASW) are used to help prevent the spread of fire from one building compartment / area to another. The ASW Aluminum Clips are used to attach the ASW H stud to the mating wood or metal horizontal track / base plate / flooring system. In the event of a fire, the ASW Aluminum Clips will soften at high temperatures enabling the hot side of that wall system to collapse, while the side without the fire remains intact thus helping to delay fire spread to adjacent building compartments.

AREA SEPARATION WALL CLIP:

- 0.050" aluminum alloy
- Designed to soften at high temperatures
- Leg 1: 2.0", Leg 2: 2.5". Width: 2.0"
- Improved design with rounded corners for safety
- Attaches to H stud via offset holes to prevent pull out

Notes:

- Hole Diameter: 5/32"
- 3 Holes on long leg distances from edges: -1" from side edge, 0.5" from top edge, spaced 3/4" apart
- 2 Holes on short leg distance from edges: -5/8" from side edge, spaced 3/4" apart

CUSTOM PRESS BRAKE PARTS:

Telling welcomes challenging part geometries! We will work with any designs or concepts to produce smaller volume customization on our unique and flexible equipment, including:

- Custom Track with the Legs longer than the web such as 3-5/8" web with 6" legs
- Custom Right Angle legs & lengths up to 12'
- Custom Brackets with lengths up to 12'

T-BRIDGE CLIPS

CLIPS

Patent # 10,508,446 | 10,563,401

T-Bridge Clips are a highly engineered new product from Telling used with T-Brace **or traditional CRC mechanical bridging**.

Telling's T-Bridge clips were engineered with the installer in mind. The ergonomic design facilitates easy screw drive access and hands free assembly. The patented T-Bridge Clips are made of 18 gauge, premium steel and are available in two functional designs, terminating and joining.

TYPES OF T-BRIDGE CLIPS:

T-BRIDGE CLIP (TERMINATING)

- Used to join T-Brace to a Stud at a corner, doorway, or end of wall
- 1.75" X 3.2" X 1.25"

T-BRIDGE CLIP (JOINING)

- Used to joint T-Brace to T-Brace or CRC to CRC for higher load applications
- 3.5" X 3.2" X 1.25"

T-Bridge clips are compatible with Telling's Standard CRC Bracing & T-Brace.

SEE THE VIDEO

FEATURES:

- Made of Galvanized Steel
- Highly Engineered for Ease of Installation
- Slides Easily into Place When Used in Conjunction with T-Brace

BENEFITS:

- Reduces Installation Time
- 10% Savings on Material and Labor Costs
- No Clips or Welding Required
- Easy Installation Due to Patented Design

SECTION	QUANTITY
TBCJ150-43	200pcs/bkt
TBCT150-43	200pcs/bkt

USES:

- Used to join T-Brace to a stud at a corner, doorway, or end of wall
- 1 Screw to T-Brace and up to 2 Screws to Stud
- Clip is also compatible with standard CRC Bracing

Allowable Rotational Loads

CFS Member	Tested Ultimate Moment (in-lbs)	Allowable Load (in-lbs)	Stiffness (in-lbs/radian)
362S162-68	1168	546	4932
362S162-97	1648	770	6972
600S162-68	1261	589	4026
600S162-97	2011	939	7097

Allowable Lateral Loads

CFS Member	Tested Ultimate Load (lbs)	Allowable Load (in-lbs)	Stiffness (lbs/in) at 0.5 Pult
362S162-68	1268	592	1260
362S162-97	1535	717	1998
600S162-68	1312	613	1390
600S162-97	2299	1074	4575

Table Notes:

1. Tested results are the average loads utilizing 16ga T-Brace Bridging with 18ga T-Bridge Clips.
2. The Rotational Stiffness is calculated based on the average test deflection divided by the load.
3. The Lateral Stiffness is calculated based on the average test deflection divided by the load at 50% of the ultimate load.
4. Results are 3rd party PE certified

INNOVATION, SERVICE, QUALITY

www.BuildStrong.com • 1-866-372-6384

Blocking a metal stud wall refers to installing a short piece of stud horizontally between the vertical studs. The purpose of blocking is to provide an attachment support point for mounted construction features like shelving, frames, cabinets, railings or other fixed hardware.

PRODUCT OFFERING:

- Blocking Gauges: 16ga and 20ga (30 mil), G60 is standard.
- Lengths: Sized to accommodate 12", 16", & 24" on-center stud spacing
- Web Sizes: Fits 3-5/8", 4", 6", 8", 10", 12" web sizes.
- Leg/Flange: 3"
- Industry Standard Blocking Nomenclature:

TB362-300-S16-54, which is Track Blocking, 3-5/8" web, 3" flange, Stud spacing of 16" on center, 54 mils thick

Blocking is connected to studs with (1) #10-16 screw at each flange.

Allowable Loads were determined based on the test results and 3rd party PE reliability analysis per AISI S100-16 Chapter K.

T-BRACE BRIDGING

INTRODUCING T-BRACE, A NEW PRODUCT INNOVATION FROM TELLING INDUSTRIES

T-Brace is used as mechanical bridging for studs. Typically, U-Channel or CRC, is attached to studs via clips or a weld to eliminate stud rotation and bending under wind or axial loads. 1-1/2" T-Brace is passed through the stud knockout and snapped securely into place with Telling's patented technology saving valuable time and money.

T-Brace features an innovative, highly engineered design that securely locks the T-Brace into the stud slot hole without the need for clips or welding for most non-structural applications.

Patent 10,309,107 | 10,590,647

FEATURES:

- Made of Galvanized Steel in 2 gauges: 16ga and 20ga (30mil)
- Highly Engineered for Secure Fit in Stud Knockout
- T-Brace Locks into the Stud without Clips or Welding
- Notches every 4" to accommodate 12", 16", 24" OC Stud Spacing

BENEFITS:

- Reduces Installation Time
- 10% Savings on Material and Labor Costs
- No Clips or Welding Required
- Easy Installation due to patented design

SEE THE VIDEO

T-Brace with self nesting geometry to fit one part inside of another and secured with a screw.
T-Brace locking features spaced every 4" to accommodate 12", 16" and 24" on center stud spacing.

Note: T-Brace is designed to lock in to studs with oval punch-outs without clips. T-Brace requires a clip to work with rectangular punch-out studs.

CORNER BEAD

T-BEAD Corner Bead is a new and improved, highly durable, galvanized bead. It provides a high-quality finish and solid protection at drywall corners. This traditional drywall finishing product can be nailed, stapled, screwed or clinched into place. Deep, knurled and perforated flanges are ideal for joint compound adhesion.

- Offers superior corrosion protection
- Strong metal reinforcement for drywall corners
- Engineered nose resists impact and forms a screed for finishing
- Ideal for humid, moisture-prone conditions and high-traffic areas

FEATURES:

- Made of galvanized steel
- Optimized bend angle
- Reinforces drywall corners
- Prevents dents, scrapes and damage
- Deeper knurling for superior adhesion
- Staggered hole pattern for a smoother finish
- Engineered nose provides a straight, clean corner definition and guards against impact damage
- T-Bead's galvanized version meets ASTM C1047
- Joint cement adheres easily to knurled flanges and keys into perforations
- Creates a smooth, seamless surface along drywall corners and intersections
- New nose design requires less mud for a superior finish every time

USES:

- Provides durable protection for drywall external corners

FLAT STRAP

PRODUCT DATA:

- Designation: FS(Width)-Mil
 - Ex: FS200-30
- Stock widths: 2", 4", 6", 8" and 10"
- Custom Widths are available in increments of even inches
- Length: 10', 12', 14', 16', 18', 20', 22', & 24' (custom lengths available in 1' increments)
 - Note: 16' through 24' length will have additional packaging costs
 - 10 piece minimum order quantities must be strictly followed for 16' & longer lengths in order to package, ship, and handle safely

GAUGES:

- 33KSI: 25, 22, 20, 20S& 18 gauge
- 50KSI: 20S, 22, 16, 14 & 12 gauge
- Cut off angle: 90°, 45°, 40°, 35°, 30°, 25°, 20°, 15°, 10°, 5°
- Available in smooth (2"-10") and knurled textures from (2" - 8").
The knurled finish helps start a screw

COATING:

- Drywall: Standard G-40 Hot Dipped Galvanized. Also Available in G-60 and G-90
- Structural: G-60 Hot Dipped Galvanized. Also Available in G-60 and G-90
- Meets applicable ASTM's for Structural and Drywall applications:
 - ASTM- A1003, A-653, A924, C-645, C754, C955, C1007

- Factory pre-cut angled ends in 5° increments
- Embossed knurled pattern to make it easier to start a screw
- Longer lengths available

Knurled pattern for better screw starting.

SLOTTED TRACK

WHAT IS TRUE-ACTION™ SLOTTED TRACK - HEAD OF WALL DEFLECTION SYSTEM?

True-Action™ Slotted Track is the industry preferred system for achieving head-of-wall deflection and fire resistance for interior and exterior walls. It meets movement and cycling requirements for ANSI/UL 2079 and is UL Classified for 1, 2, 3, and 4 hour fire-resistant ratings in head-of-wall fire-rated joint systems.

BENEFITS:

- Fire-rated deflection system
- UL Classified in over 80 approved fire-rated systems
- Standard Slotted Track allows vertical movement
- Custom web, leg and lengths are available
(Custom slot sizes are not available)
- Positive attachment provided for wall strength
- Absorbs head-of-wall and floor extension or compression movement
- Integrated with traditional wall systems
- Easy installation reduces labor costs

Telling Slotted Track is listed in many gypsum based UL Wall Designs utilizing 0.030" material or thicker for Studs with a web ranging from 2.5" to 8.0".

RESILIENT FURRING CHANNEL

CLIPS

PRODUCT DATA:

- RC-1: Single Leg
- RC-2: Double Leg
- Gauge: Standard 25 gauge conforming to ASTM A-653 and C-645
- Lengths: 12' 0" stock length
- RC-1: Screw attachment, one side only
- RC-2: Screw attachment, both sides

USES:

- Used as cross furring members for resilient attachment of gypsum wallboard or lath on ceilings and partitions
- Decreased sound transmission through wall partitions and ceilings up to 13%

TYPICAL RC-1 INSTALLATION INSTRUCTIONS FOR WALLS

- Bottom RC-1 installed with mounting leg turned up, spaced 2" up from top track leg.
- Top RC-1 installed with mounting leg turned down, spaced 6" down from track leg.
- Middle RC-1 installed with mounting leg turned down, spaced 24" apart.
- Please reference Gypsum Association's GA-216 guidelines.

TYPICAL RC-1 INSTALLATION INSTRUCTIONS FOR CEILINGS

- When RC-1 is installed on a ceiling, it should be installed perpendicular to the joists.
- RC-1 should be installed on ceilings with the open side facing the same direction across the entire ceiling.
- RC-1 on ceilings should be install with maximum of 6" spacing out from a wall.
- 16" OC joist spacing use 24" RC-1 spacing. 24" OC joist spacing use 16" RC-1 spacing.
- RC-1 can be overlapped at a support location with a minimum of 4" overlap.
- No more than two 5/8" gypsum boards should be fastened to an RC-1 channel with a maximum load of 5 lbs per SF.

U-CHANNEL (CRC)

PRODUCT DATA:

- Available in galvanized steel meeting ASTM A-1003 or hot-dipped galvanized steel meeting ASTM A-653, G60.
- Lengths: 16' stock length. (Other lengths available)

USES:

- Bridging, (lateral support) in walls carrying axial and/or wind loads.
- Bracing studs at door bucks and furring for ceilings.
- Used in conjunction with metal lath and plaster in partitions, ceilings, column and beam enclosures, etc.

U-CHANNEL (CRC) SECTION PROPERTIES

Section	Design Thickness (in)	Gross						Effective Properties 33 ksi			
		Area (in ²)	Weight (lb/ft)	I _x (in ⁴)	R _x (in)	I _y (in ⁴)	R _y (in)	I _x (in ⁴)	S _x (in ³)	M _a (in-k)	V _a (lb)
CRC-075	0.0566	0.087	0.30	0.007	0.288	0.002	0.155	0.007	0.019	0.45	315

- Notes:
- Minimum deliverable base metal thickness is 95% of design thickness.
 - Inside bend radius taken as 3/32"
 - Effective properties based on F_y = 33ksi
 - For deflection calculations, use the effective moment of inertia

DRYWALL FURRING CHANNEL

PRODUCT DATA:

- Available in 7/8" and 1-1/2" sizes.
- Gauge: Standard 25 through 12 gauges.
- Lengths: 12' 0": stock length, (other lengths available).
- Consult Telling Industries' light gauges structural framing and accessories brochure for structural properties and span tables

USES:

- Conventional accessory components for use in furring out ceilings and masonry walls. Knurled face prevents screw "ride" when attaching gypsum wallboard.
- 1-1/2" DWFC is economical with respect to furring walls with electrical boxes, (no need to set into concrete).

(ZFC) Z-FURRING CHANNEL

PRODUCT DATA:

- Available in hot-dipped galvanized steel conforming to ASTM A-653 and C-645
- Gauges: Standard 25 gauge, (available in 20, 18, and 16 gauge upon request)
- Lengths: Standard 10' and 8' lengths, (other lengths available upon request)

Product	(A) in. Size	25 Ga. Wt./Ft.
Z-100	1.00	0.195
Z-150	1.50	0.225
Z-200	2.00	0.260

(CLT) CUSTOM LEG TRACK

PRODUCT DATA:

- Designation: CLT or VST width x gauge
- Widths: Multiple sizes and gauges available
- Gauge: Multiple sizes available
- Lengths: Standard 10'

USES:

- CLT used for standard built construction with channel or bracing attached within 2' of track member to each stud
- For attachment at top of infill curtain wall systems to primary frame; allows for one half inch of live load deflection or settlement of the primary frame without transferring the load to the exterior wall while bracing the wall against lateral forces
- Variable width and height for track-in-track application such as panel construction

(WS) WEB STIFFENERS

PRODUCT DATA:

- Designation: WS W x F x gauge
- Length: 4, 6, 7-1/4, 8, 9-1/4, 10, 12 inch
- Galvanized finish
- For axial capacities contact Telling Industries Engineering

USES:

- For web reinforcement of C shaped framing members
- Allow transfer of axial loads through joists at bearing conditions of platform frames

AREA SEPARATION WALL assemblies are designed for use in multi-family, multi-story townhouses as a firewall with a total height up to 50 feet. Because it is constructed using gypsum board, the assembly is easy to erect and secure, meets all building code requirements, and provides economical fire protection and sound control. Telling's Area Separation Wall utilizes H studs as referenced in UL wall assemblies U336, U347, U366, & U375.

NOTES:

1. Allowable composite limiting heights are calculated using ICC-ES-AC86-2012
2. "f" indicates flexural stress controls the allowable wall height
3. "s" indicates the end reaction controls the allowable wall height
4. Wall Construction was: Type X 5/8" thick Gypsum board, & #6 screws
5. Stud Spacing was 24" on center
6. 600CT-33 and 600CT-40 assemblies require a 6 in screw spacing for the gypsum board along the top & bottom track.

TITAN HEADER SYSTEM

ONE PIECE HEADER FRAMING SYSTEM

The Titan one piece wide flange header and jamb offers a better solution for framing multiple openings than the conventional lay-in or boxed headers.

SYSTEM ADVANTAGES:

- No more built-up jambs and headers
- Saves over 50% in installation and material over conventional framing
- Substantial reduction in number of screws and labor
- Header quickly attaches to jamb with fully tested, pre-drilled Titan Header Clip

SEE THE VIDEO

MATERIAL

SPECIFICATIONS:

ASTM 1003, Grade 50

PRODUCT AVAILABILITY:

Titan Header & Jamb

- **Web:** 3-5/8", 4", 6", & 8"
- **Flanges:** 2-1/2" & 3"
- **Lip/Return:** 7/8"
- **Thickness:**
 - 54 mils (16ga) 50KSI
 - 68 mils (14ga) 50KSI
 - 97 mils (12ga) 50KSI

TITAN HEADER CLIP

- **Length:** 3-5/8", 6" & 8" x 1-1/2"
- **Web:** 2.5", 3.0"
- **Thickness:** 68 mils (14ga) 50KSI

Header Size		Titan Header Clip Allowable Load Capacity	
Web Depth (in)	Flange Width (in)	Vertical Load (lbs)	Horizontal Load (lbs)
3-5/8	2-1/2	1140	1520
4		1140	1740
6		1140	1930
8		1140	1930
3-5/8	3	1140	1520
4		1140	1740
6		1140	1930
8		1140	1930

1. Attach THC (clip) with (4) #10-16 screws to Titan Jamb and Titan Header respectively.
2. Listed values are based on 54 mil (16 gauge), 50 ksi Titan Header and Jamb.
3. For combined vertical and horizontal, use linear interaction equation.
4. Tabulated values are based on testing in accordance with the requirements of ICC-ES AC261.
5. Allowable loads are calculated with Safety factor, Ω , of 2.711 for vertical and 2.606 for horizontal.
6. Safety factors are calculated in accordance with the provisions of Section F1 of AISI S100 with the statistical parameters given in AC261.

T-RULE TECHNOLOGY

US PATENT 11,002,011

MARKET NEED:

- Some metal framing must be custom cut to length at the job site.
- The inaccuracy of stretching a tape measure across a metal framing component, marking it, then field cutting or track and stud layout can lead to undesirable length variation and increased install time.
- If the length variation is too excessive, the field cut metal framing components may need to be scrapped and new pieces re-cut, resulting in higher material costs.

SOLUTION:

- Telling has a patented invention to add ruler marking to metal framing stud & track to simplify field cutting and wall layouts.
- The ruler markings will be permanently applied via etching/embossing.

PRODUCT INFO:

- Readily available on 30mil & 33mil traditional drywall studs at no upcharge.
- The marking will be in $\frac{1}{4}$ ", $\frac{1}{2}$ " & 1" increments.
- Available upon request for 18ga & 16ga studs for a modest upcharge.
- Standard: 2ft of etched ruler marking.
- Upon request: etch entire length of stud for a modest upcharge.
- Track is coming soon!

NO MORE MEASURING TAPE! TRUE-RULE TECHNOLOGY MAKES CUTTING STUD AND TRACK A BREEZE!

TRADITIONAL FRAMING

Telling offers a full product line of traditional full gauge metal framing for interior non-load bearing drywall applications. Our patent True-Rule technology can be applied to most Traditional Stud options.

Telling's Traditional Metal Framing is listed in the International Code Compliance Evaluation Service Report (ICC-ESR 2281) verifying load bearing light gauge steel framing products are code compliant. This report and 3rd party quality audit validation provides evidence that both our products, and our quality processes meet or exceed International Building Code standards. Telling's Traditional Metal Framing complies with AISI S100, ASTM A653, ASTM A1003, ASTM C645, ASTM C754. FBC Florida Building Code 2023 compliant per ICC ESR 2281.

SUPREME STUD AND TRACK CERTIFICATION

Supreme products have an industry standard, four-part identification code that identifies the web depth, flange width, style, and mil thickness. For example: 362SFS125-D20 = 3-5/8" web Supreme Framing Stud 1-1/4" leg at 20eq thickness.

The Supreme Framing System offers all the benefits of traditional flat steel studs and track. It consists of high strength metal framing with a design that achieves equal or better performance by using superior 57 ksi yield strength and thinner steel.

All inspections and testing for the Supreme Steel Framing System Association (SSFSA) are provided by a third-party certification agency where products are required to be audited to ensure consistent quality and compliance to ASTM C645, C955, IBC Codes, and AISI S100-07 standards.

Supreme Stud Stiffening Lip Length remains constant with various web sizes

SUPREME STUD

Thickness Nomenclature	Min Base Metal Thickness (in)	Design Thickness (in)	Min Yield Strength (ksi)	Standard Galvanization	Web Sizes (in)	Stud Flange / Leg Sizes (in)	Track Flange / Leg Sizes (in)	Design Inside Corner Radii (in)
D25	0.0147"	0.0155"	50 or 57 ksi	G40	1-5/8", 2.5", 3.5", 3-5/8", 4", 5.5", 6"	1-1/4"	1-1/4" and 1-1/2"*	0.0860"
D20	0.0179"	0.0188"	57 ksi	G40	1-5/8", 2.5", 3.5", 3-5/8", 4", 5.5", 6"	1-1/4" and 1-7/16"	1-1/4" and 1-1/2"*, 2"*	0.0844"
30EQD	0.0223"	0.0235"	57 ksi	G40	1-5/8", 2.5", 3.5", 3-5/8", 4", 5.5", 6"	1-1/4" and 1-7/16"	1-1/4", 1-1/2" and 2"*	0.0820"

D = Drywall / Non Structural, S = Structural

Higher galvanization available

* = Track height to weight ratio exceeds AISI S100 guidelines

SUPREME DEEP LEG TRACK

Thickness Nomenclature	Min Base Metal Thickness (in)	Design Thickness (in)	Min Yield Strength (ksi)	Standard Galvanization	Track Web Sizes (in)	Track Flange / Leg Sizes (in)	Gap (in)
D20	0.0179"	0.0188"	57 ksi	G40	2.5", 3.5", 3-5/8", 4", 5.5", 6"	2", 2.5", 3"	2" leg = 1/2" gap 2.5" leg = 3/4" gap 3.0" leg = 1.0" gap
30EQD	0.0223"	0.0235"	57 ksi	G40	2.5", 3.5", 3-5/8", 4", 5.5", 6"	2", 2.5", 3"	

D = Drywall / Non Structural, S = Structural
